FUNCTION INSTRUCTION

1. Button & Lever design

Operator can push lever for releasing the gear socket back to the open position. Full down the button and lever for operation.

2. Outside adjust the torque rapidly & Torque Cover

To prevent improper torque adjustment by operator, this up-to-the-date design fixes torque at same standard. Further, for this special structure design, the torque cover is necessary for tool during operation. Due to the safety consideration and to prevent the tool be broken by any impacting, please operate tool as per this instruction manual and note it is prohibitive to operate tool without torque cover.

3. Easy for change the Gear Socket [Forward only] and [Reverse / Forward]

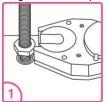

Operator can change the gear socket easily and two model types can choose. [Forward only] is for Right rotation only and this model type can accurate tube nut tightening. [Reverse / Forward] is for Left& Right rotation and this model type can use for tiny area as well.

TOOL OPERATION

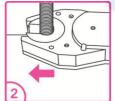

- 1 Confirm if the air hose or air pipe is clean and dry.
- 2 Make sure the air hose or air pipe is well connected with air open-end wrench.
- **3** Make sure the torque cover is well fixed on tool before operating.

4 Push lever for releasing the gear socket back to the open position. Due to the safety consideration, please hold carefully the tool

during the whole operating duration.

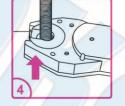

Push lever for releasing, back to the open position.

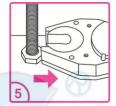

Slide on the fastener.

stener. Full down the but

Full down the button and lever for operation.

Slide off the tightened fastener to free the tool.

Operate the lever to release, back to the open position.

- **5** Air motor will automatically stop when the load reaches at the pre-set torque.
- **6** The Torque Calibration is only for reference and it is not real torque or equal torque.

Caution: Improper operation may damage the tool.

AIR SUPPLY

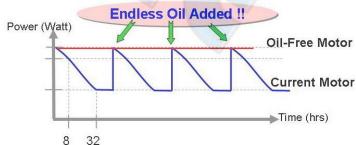

- Air tools are adversely affected by moisture. Since air from compressor contains much moisture and dust, it is desirable to provide a filter in the pipeline to remove such undesirable elements. Also take the drain out from air tank every day.
- When using brand-new air hose or air pipe, blow and clean the air hose or pipe inside before installation.
- 3 Keep air hose or air pipe inside clean to prevent airdrop problem caused by lots of drain and dust accumulated, either to avoid possibly inside diameter smaller problem after long term usage.
- 4 When disconnect air hose from air tool during operation, do not drop air hose end to the floor as dust or other element may get into air hose.
- 5 Use air regulator to keep stable air pressure at 6.0kgf-cm² (80~90psi) at the toll. It is important to get proper air pressure at the toll.
- With high quality Oil-free motor, any moisture or lubrication injection may damage the air screwdriver, please keep tool dry and avoid oil based substances exposing to the products. For avoiding moisture affection, using Air Dryer is necessary in wet area or under moist weather.

TOOL ADVANTAGE

1 High quality Oil-free Motor

High quality Oil-free Motor is our new design used on high technologic tool. At the beginning operation, the power of Oil-free motor keeps stable at it's top capability without any oil injection, but the power of Current motor decreases till it's lowest capability after 32 hours operating unless oil adding. The high technologic Oil-free motor increases 60% torque and keeps noise as standard 74/78dB which prevents operator and environment from noise damaging and accords with industrial classified tool standard. (Please refer to the below table about Oil-free and current motor.)

2 All new patented mechanical design and comfort grip material

This new patented mechanical design is 20% lighter than other brand. With the unity sharping composite grip and best balance design made by thermoplastic elastomer, the tool possess better lasting, wearing-resisting, comfortable grasp and anti-glossy features.

3 Speediness

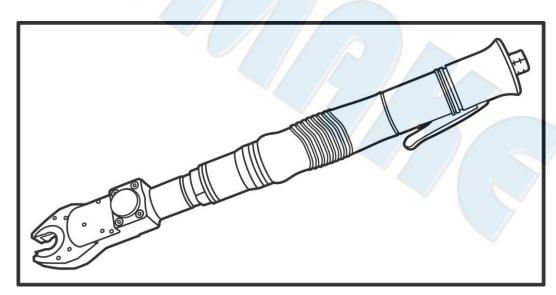

Operator can change the gear socket easily between [Forward only] and [Reverse / Forward] type.

USING CAUTION

- 1 Please note improper operating may damage the tool.
- 2 Due to the safety consideration, please make sure tool is completely under control before and during operation.
- 3 Changing the rotation direction at will without stopping first the operation may damage the motor or reduce the usage term. Please note it is prohibited to change the rotation direction during operation, the proper operating method is stop first the operation, then change the rotation direction by pushing the Valve reverse switch.
- 4 The air screwdriver can be damaged by accidental falls or impacts. Due to the safety consideration, please hold the tool carefully or use the hook to prevent the tool dropping down.
- Any moisture or lubrication injection may damage the air screwdriver, please keep tool dry and avoid oil based substances exposing to the products. For avoiding moisture affection, using Air Dryer is necessary in wet area or under moist weather.
